iSante version 21.1 note

Fixed bugs related to viral load reports.

- Now the system considers a viral load result that is entered into a laboratory sheet along with other types of tests.
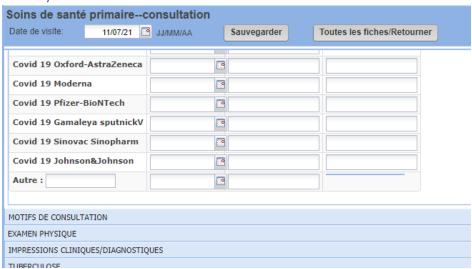

Editing forms

Covid-19 vaccine

iSante gives the possibility toenter in the primary health care sheet first consultation and consultation the Covid-19 vaccination

Primary healthcare: first consultation

Soins de santé primaire--première consultation

TUBERCULOSE

Covid-19 diagnostics and other diagnostics

Suspected COVID 19 and confirmed COVID 19 have been featured in the list of clinical and diagnostic impressions in primary healthcare records.

Dispensation ARV DDP

For patients who are subscribed in DDP, the user will have to check the distribution tab in DDP in the prescription form. See figure below

Care for patients with a date of next dispensation in another site

If the patient has a next dispensation date in the future from another site, the user adds the following two pieces of information to the patient's last dispensation record: the patient's other site and the date of the next dispensation in that site. The provider asks the patient to pick up the medications on the date of the next dispensation corresponding to the amount of medication he has left.

NB. If the patient has multiple next dispensation dates in several other sites, the provider considers the site where the dispensation date is furthest away.

ANTECEDENTS TB

The TB status section is changed to TB antecedents in the first HIV visit. This section is not on follow-up form.

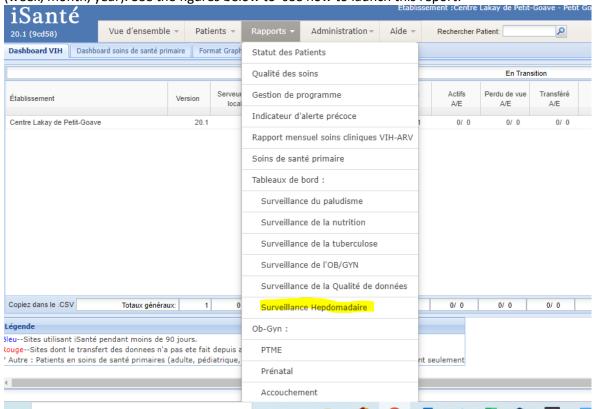

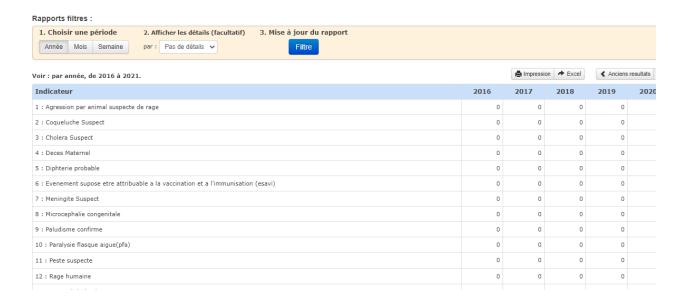

Other changes

- Modification of the TB evaluation section
- Addition of Raltegravir, Darunavir, atazanavir for children
- Add dosages for children
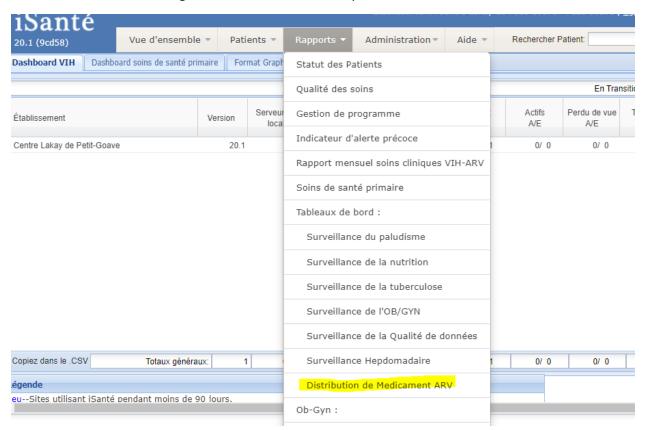

commerce

Weekly monitoring report

This report gives statistics on Diseases / Phenomena Under Epidemiological Surveillance by period (week, month, year). See the figures below to see how to launch this report:

1. Choisir une période	2. Afficher les détails (facultatif)	3. Mise à jour du rapport
Année Mois Semaine	par : Pas de détails ▾	Filtre

Voir : par année, de 2016 à 2021.

Other Reports

Six other reports have also been added on iSante. These reports produce a list of patients who meet the criteria. The following is a list of additional reports:

- List of patients who have received at least one dose of covid-19 vaccine
- List of patients suspected of covid 19
- List of confirmed covid 19 patients
- Active HIV+ patients on ARVs screened for TB
- Patients with Incomplete TB Prophylaxis
- TB-negative patients who did not receive prophylaxis

Features

Changes in the calculation of patient status

The patient status report also considers the date of the next dispensation at the other enrollment site.

Replace tb status section with TB background

Add "Batch" in vaccination sections
